ETKA 8.5

Information improves efficiency

ETKA 8.5 focuses on the enhancement of user interfaces in order to optimize the daily work with ETKA.

You will find new interfaces for the Tools catalog, the Parts Locator, the Service Key and the REACH information. Additionally, we welcome CUPRA as a new brand with its own access to ETKA.

Important notes

■ New URL for ETKA operation

To fully ensure that the usual quality of the internet-based functions of your ETKA systems is maintained in the future, it is necessary that some specific internet addresses can be reached from your system.

Newly added with ETKA 8.5:

<https://licenseserver.lex-com.net/...>

Please make sure that this URL can be reached by your ETKA system from now on. More information can be found [here](#).

■ Adjustment of the expiration date for the ETKA data update

With the worldwide availability of ETKA 8.5, the expiration period for data updates will be shortened from 12 to 4 weeks. I.e., ETKA data updates must be installed every 4 weeks at the latest. After this period has expired, the catalog for the affected brand cannot be used again until the latest data updates have been installed.

■ Using ETKA with Windows 7 is no longer supported. Please use Windows 8 or a higher version.

Notes

#1 NEW DESIGN OF THE TOOLS CATALOG

The catalog for workshop equipment (Tools) has been re-designed and offers, among others, the following improvements:

- Product search directly on the home page of the catalog. The search considers only products of the Tools catalog, and it is possible to search in all categories or only in specific ones.
- Display of new or discontinued products.
- Direct transfer of products from the illustrated overview into the shopping cart.

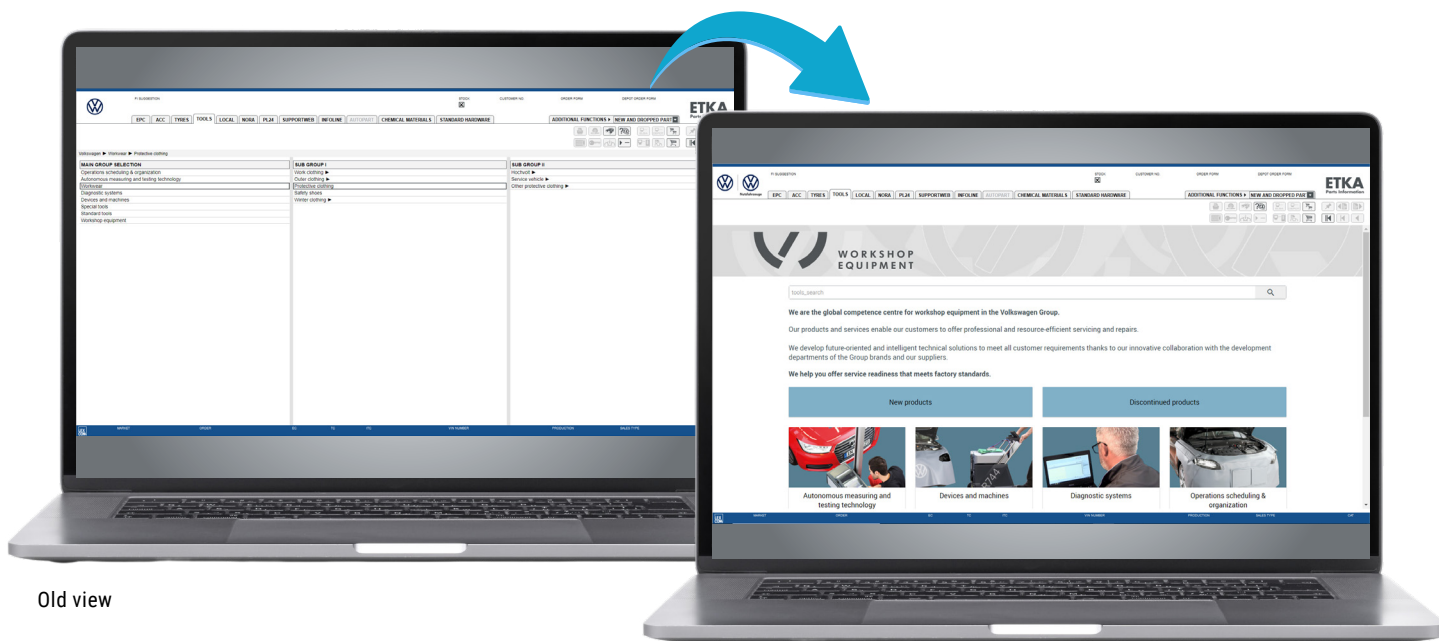

You will find a more detailed description of the new design in this separate > [info document](#).

Your advantage:

The catalog for workshop equipment gets a modern, contemporary design.

Save time with the new search function and the possibility to already add items to the shopping cart in the overview.

Notes

#2 ETKA PARTS LOCATOR

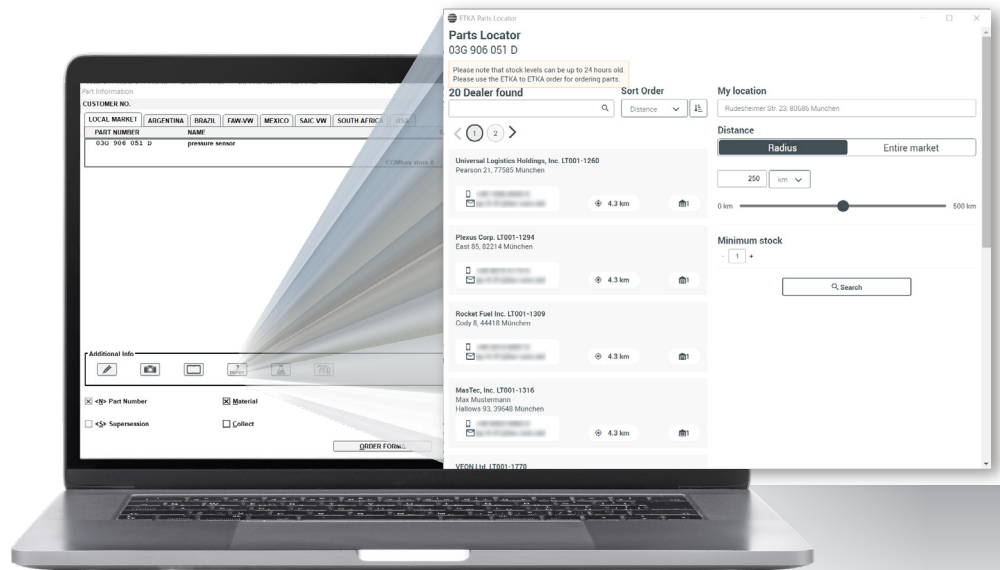

With the new Parts Locator, ETKA offers the possibility to check parts availability at other, selected ETKA dealers. *

The Parts Locator displays the dealer's stock, the distance to that dealer and the phone number and email address to contact them. A direct input or a slider is available for selecting the distance in the proximity search. In addition, the display of Parts Locator results can be customized to your personal needs with filter criteria such as dealer name or minimum stock.

Your advantage:
Find needed parts quickly and easily at other ETKA dealers in your market. Define for yourself the preferred radius of your search and the minimum stock. Contact the dealer via the displayed contact details** or order directly via ETKA to ETKA order.

→ **Tip:** The easiest way to order parts from other ETKA dealers is as an ETKA to ETKA order in the order form. You can find instructions on how to do this [here](#).

*The Parts Locator is available in all markets, where AutoPart is introduced.
**The displayed contact data corresponds to the company master data stored in ETKAinfo.

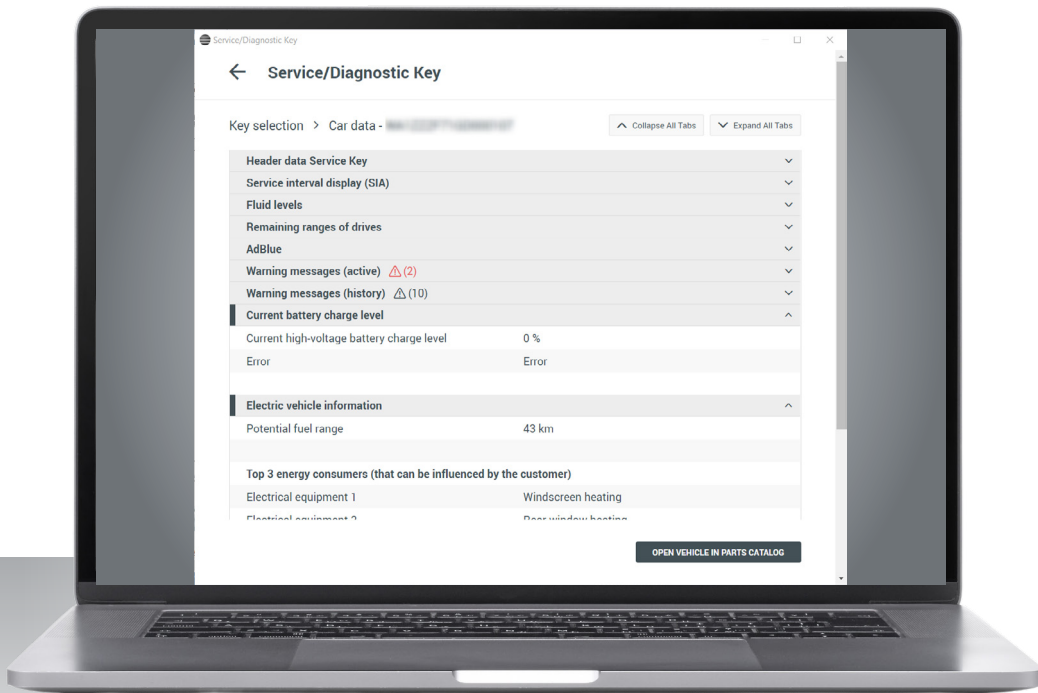

Notes

#3 SERVICE KEY ENHANCEMENTS

The Service Key function of ETKA has also been redesigned. From now on, you can conveniently select the ten most recently read keys in a history (storage 30 days). All previous data of a key can be found in a revised view. Information for electric vehicles has been added, such as the battery charge status and the range potential. For a better overview, it is possible to collapse specific tabs.

Your advantage:
See all important service key data at a glance. From now on, you also have the most important data for electric vehicles at your disposal.

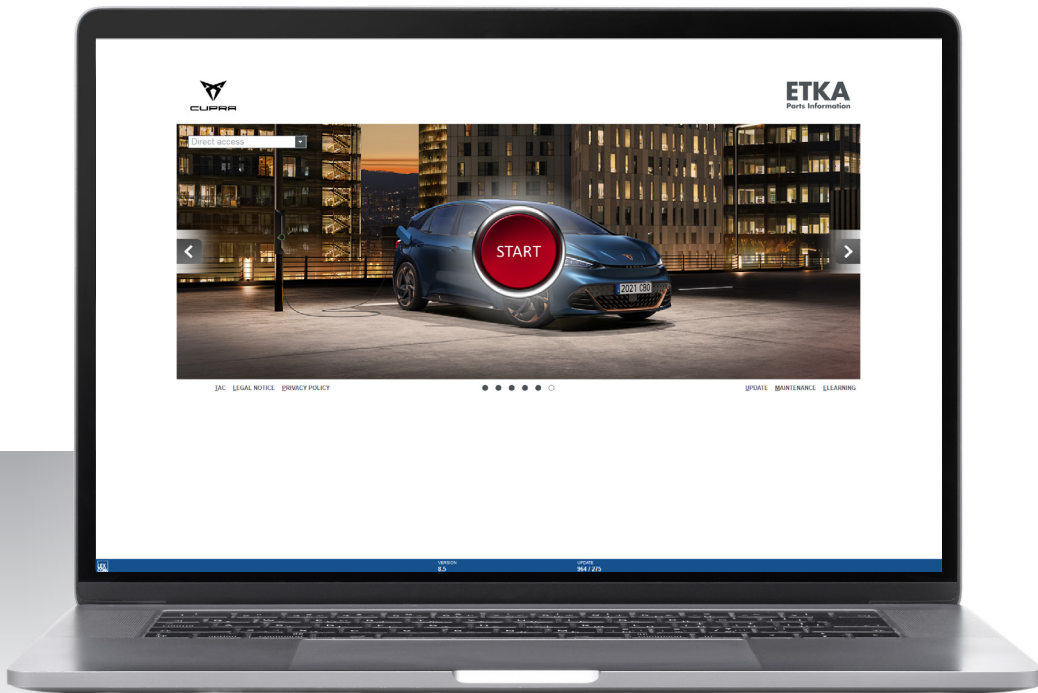

Notes

#4 CUPRA AS A NEW BRAND

CUPRA now has its own access to the SEAT parts catalog.

Your advantage:
Expansion of the brand portfolio and representation of the CUPRA brand in ETKA. Enter the parts catalog directly via the CUPRA brand.

Notes

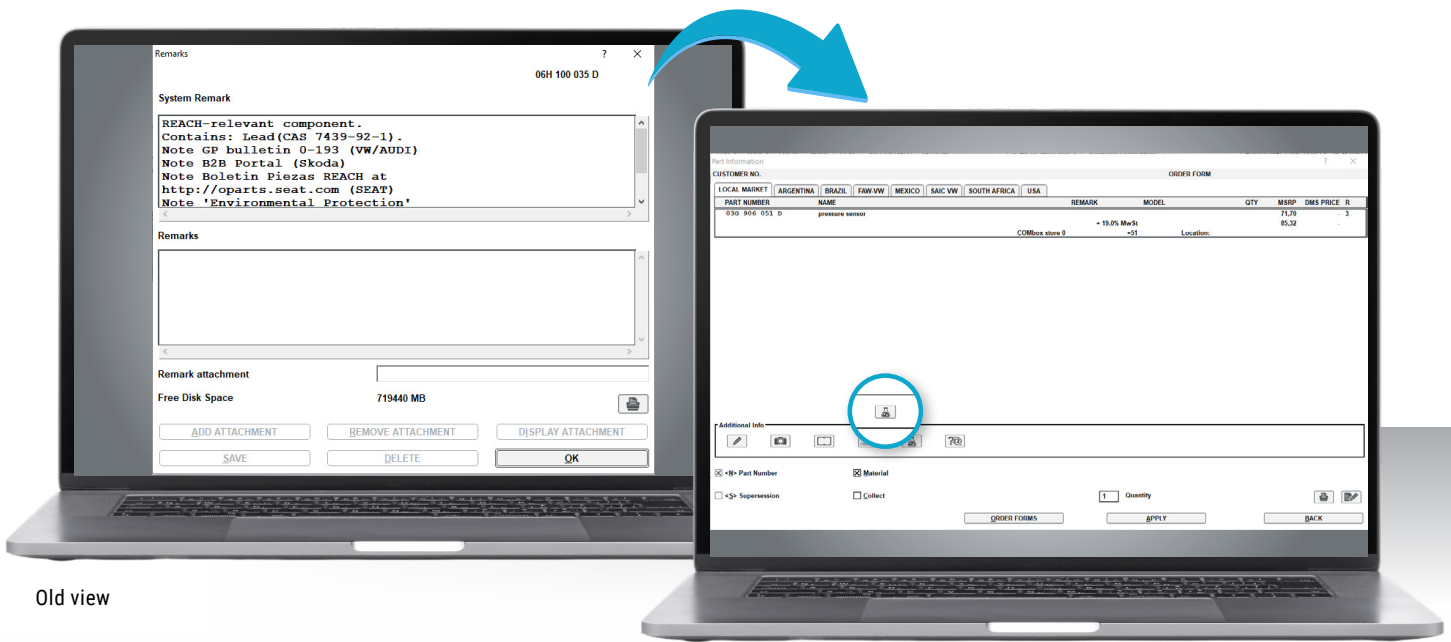

#5 IMPROVED DISPLAY OF REACH INFORMATION

Up to now, the information on hazardous substances was displayed as a system remark when the part information was opened.

As of ETKA 8.5, you will find the REACH information as a button in the additional information. A click on the REACH button opens a browser window with the corresponding information. The display of the hazardous substance information as a system remark will be removed at a later point in time.

Your advantage:
REACH information is accessible at any time via the corresponding button. In the future, the parts information can be called up without having to open the system remark for REACH information, making it possible to work more efficiently.

Notes

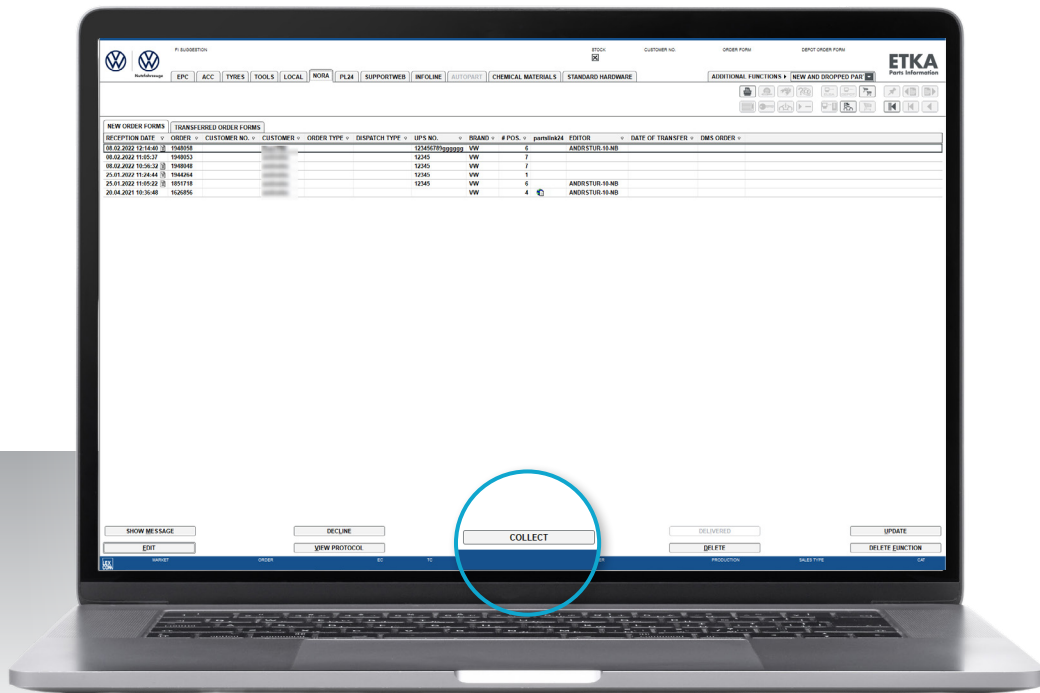

#6

CONVERSION OF NORA ORDER FORMS INTO DEPOT ORDER FORMS

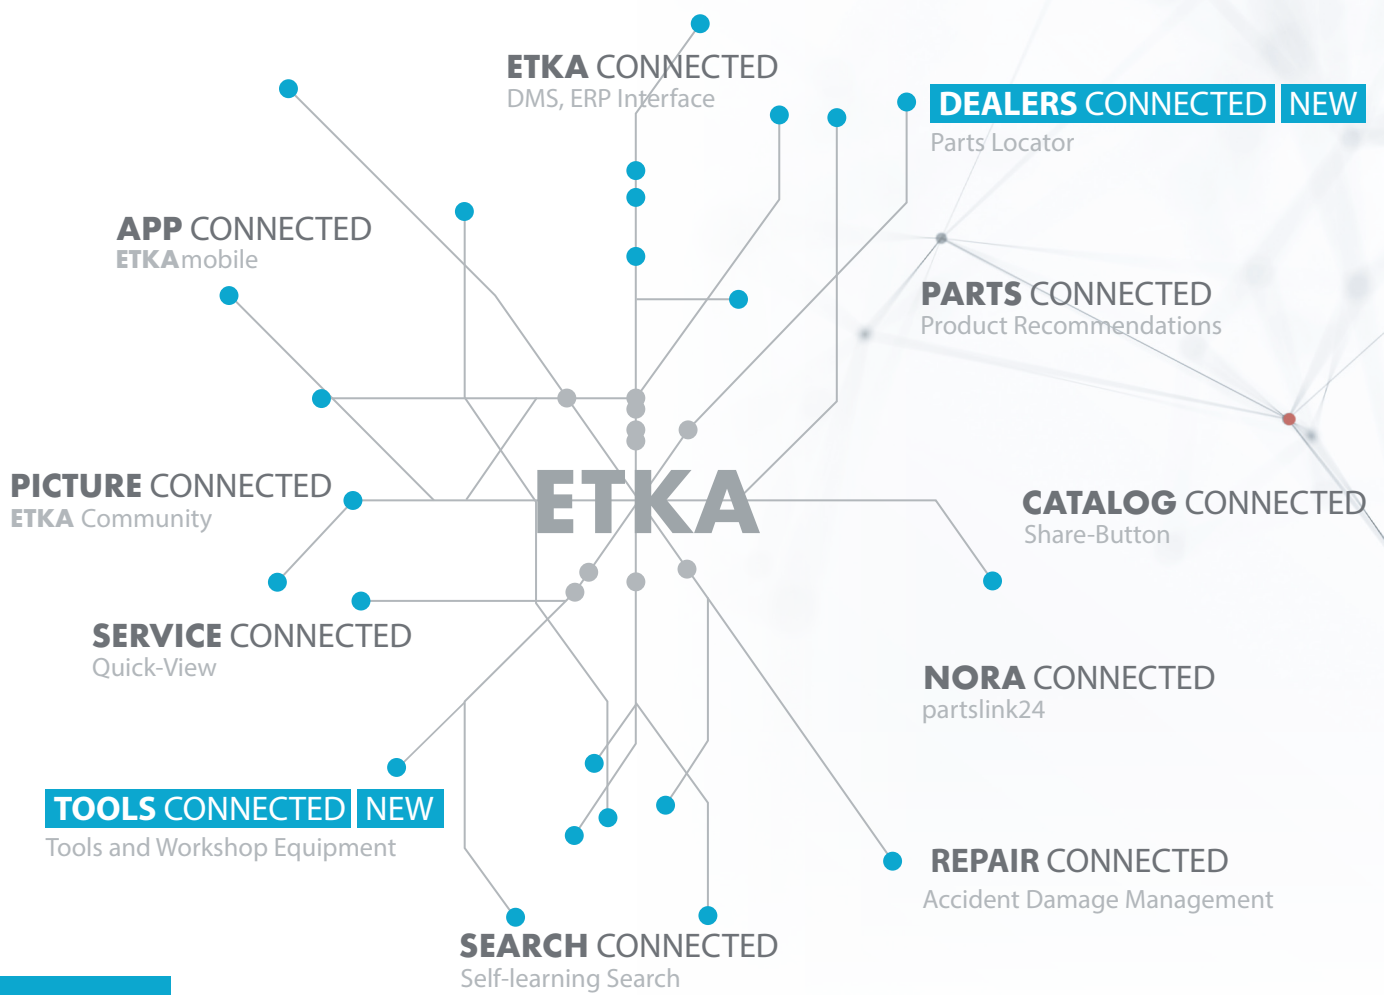

In ETKA 8.5, order forms can be converted completely into depot order forms.

Your advantage:
In case you already use the transfer of depot order forms to external systems you can do the same with converted NORA order forms now.
